2008ICT: Design Thinking in IT

Assignment 1: Design Document/Low Fidelity Prototyping (40%)

DEADLINE: EOD Friday Week 6

Aim: Produce a design document and low fidelity prototype on the proposed website that will be the main deliverable of the course. Includes requirement elicitation, design solution (storyboards) and style guide.

Deliverables:

- Team: Each team will upload one completed design document template (PDF file).
- Individual: Each student will upload a completed peer review document template (PDF file).

Team name: _____ NA08 _____

DESIGN DOCUMENT	POOR	BELOW AVERAGE	AVERAGE	GOOD	EXCELLENT	Mark
Design Thinking /30	0-7: No or limited design. Limited engagement with design thinking context and/or project problem domain. Poor quality or very brief.	8-14: Attempt at using design thinking principles. Either incomplete sections or a misunderstanding of the phases or their application	15-20: Adequate use of design thinking principles. May have a number of issues including unbalanced/limited sections and/or content relevance.	21-25: Evidence of Design Thinking major phases. May have one or two minor issues with unbalanced/limited sections or content relevance.	26-30: Evidence of excellent use of design thinking principles covering the five major phases. Excellent engagement with project domain.	17
Requirements /10	0-2: No or limited requirements elicitation. Limited engagement with project problem domain. Poor quality or very brief.	3-4: Attempt at requirements elicitation. Overly brief or lacking in coverage.	5-6: Adequate mapping of requirements to project domain. Enough detail to support design, implementation and evaluation.	7-8: Evidence of appropriate requirements gathering and structured presentation. Considers functional and non-functional requirements	9-10: Excellent and comprehensive requirements. Excellent detail and project coverage. Labelled requirements suitable for mapping to testing and evaluation.	9
Storyboards /20	0-4: No or limited storyboards. Limited coverage of project problem domain. Poor quality or very brief.	5-9: Attempt at storyboards. Either poorly defined or limited in coverage. Not adequate to support design.	10-13: Adequate use of storyboards covering major components of the design. Some minor issues with scope/presentation.	14-17: Evidence of detailed storyboards highlighting design decisions. Includes elements of responsive design.	18-20: Excellent and comprehensive storyboards. Use of non-linear scenario mappings and detailed components to facilitate implementation.	7

Universal Design/Branding /10	0-2: No or limited universal design consideration and/or branding. Poor quality or very brief.	3-4: Limited coverage in universal design. Poor engagement with domain area. Inconsistent and/or limited branding.	5-6: Clear application of universal design and branding guidelines. Provision of a style guide mapped to appropriate branding.	7-8: Detailed use of universal design with examples. High quality graphics matched to brand awareness appropriate to project topic.	9-10: Excellent use and demonstration of universal design principles. Excellent and relevant branding.	4
Low Fidelity Prototype (/20)	0-4: No or very limited evidence of low fidelity website prototype.	5-9: Some evidence of website. One or more of: very simple, limited in scope or little evidence of robustness, poor use of Design Thinking methods.	10-13: Evidence of appropriate low fidelity prototype. Some minor errors in either method and/or presentation of prototype. Use of methods from this course.	14-17: Good low fi prototype. Good coverage of problem domain and appropriate scope.	18-20: Excellent low fidelity prototype. Detailed overview of website. Excellent mapping to project aims and scenario.	13
Minutes and meetings summary /5	0-1: No or limited meeting summaries. Few meetings and/or limited evidence of group work. No or little evidence of action list review.	2: Limited or very few meetings. Incomplete or very basic meeting notes. Limited evidence of action review.	3: Basic but adequate meeting summaries. Meetings mostly in lab sessions. Basic table format or overly brief. Some action list review. At least three (3) meeting.	4: Formal meeting summaries. Descriptive overview of meetings and project progress. Descriptive action list review.	5: Detailed meeting summaries with roles, minutes, action lists. Well structured. Reflection on decisions/group dynamics.	3
Quality of document and academic literacy /5	0-1: Consistent major errors in structure and communication, poor academic literacy used.	2: Mix of major and minor errors in either document or paragraph structure, or in academic language or ideas are not logically connected. Inadequate academic literacy.	3: Several minor errors in either documents or paragraph structure, or in academic language or ideas are not logically connected. Has numerous errors in academic literacy. Document in PDF format.	4: Minor errors in either documents or paragraph structure, or in academic language or ideas are not logically connected. Has minor errors in academic literacy.	5: Documents are lucidly written, cogent and concise. It is well structured, flows well and the ideas are clearly expressed. Demonstrates excellent academic literacy.	4

Weighting Factor (100)	Absent or poor	Below average	Average	Good	Excellent	WF
Course engagement /100	0-39: Poor course engagement. Missing course elements. Missing team meetings. Poor diary entries. Limited team contributions. Poor peer review. No peer review submitted.	30-49: Limited course engagement. Mixed quality in diary entries. Limited team involvement. Mixed peer review.	50-69: Adequate course engagement. Individual peer review submitted, diary entries submitted, evidence of workshop engagement. Valued team member.	70-89: Good course engagement. Detailed peer review, diary entries submitted on time, most workshops completed, Valued team member.	90-100: Excellent engagement with the course across all elements.	

Design Document Mark 57 * Weighting Factor 1 = Total Mark (%) 57

ADDITIONAL FEEDBACK

Use of DT:

Ok but very solution based

The survey did not really cover the project main topic. There are other, better, options here, i.e. the AI interviews. Improve with details on how Test contributed to the other phases.

Problem statement as a solution

Solution not explicitly defined.

Requirements:

Improved with classification of NFT, e.g. usability, security, maintenance

Storyboards:

Overviews only. No examples on the design of the proposed solution.

No non-linear paths

Improved with more examples of interaction

Improved with example of responsive design.

UD and Branding

Ok branding but limited UD.

Low Fidelity Prototypes

Ok but brief. Having a dashboard connected to actual house data outside the project brief.

Maps to current document.

Good example but your branding was not included. The material here on testing is strange. I've looked at the journals and there is no evidence that this happened. It looks likely that it is a product of Gen-AI. If so this should be noted and the context in how it has been presented made clear.

Meetings and Document Quality

Overly brief. No action list.

Good overall. Each image should have a figure number, label and be referenced in the text.

School of ICT

NOTE: Submissions after the **deadline** will have marks reduced by **5% per day** late (The weekend counts as 2 days.). We recognize in group work that sometimes not everyone contributes equally to the group tasks. Thus, although groups receive a single mark for their submission, **we reserve the right to vary individuals' marks based on peer feedback from other group members and feedback received from course staff.**
